

Ideation Phase
Empathize & Discover

Date	27 June 2026
Team ID	SWTID-2026-6335
Project Name	HEART DISEASE ANALYSIS
Maximum Marks	4 Marks

Empathy Map Canvas:

The primary users of the Heart Disease Analysis dashboard are individuals, healthcare professionals, and health organizations seeking to understand heart disease risk factors. Users think and feel concerned about their health and want to prevent heart disease through early diagnosis and informed decisions. They see increasing cases of heart disease related to age, diabetes, smoking, obesity, and poor general health, and hear advice from doctors, family members, and health awareness programs encouraging healthy lifestyles. They say and do things such as attending regular health checkups, exercising, improving their diet, and monitoring chronic conditions. Their main pain points include fear of heart disease, lack of awareness, unhealthy habits, and difficulty identifying risk factors, while their gains are better health awareness, early disease detection, improved lifestyle choices, and reduced risk of heart disease and stroke through data-driven insights.

Example:

Empathy Map for Patient

Says

- Needs real care, not just company.
- Wants clear information about services.
- Can't manage everything alone.
- Trust is more important than price.
- Needs verified and honest reviews.

Thinks

- Are they qualified and trustworthy?
- Will the care be consistent?
- Is it worth the money?
- Will my father be comfortable?
- What if something goes wrong?

Does

- Searches online and asks for suggestions.
- Compares options and reviews.
- Coordinates via calls or WhatsApp.
- Manages work, family, and care.
- Verifies details before deciding.

Feels

- Overwhelmed and stressed.
- Anxious about quality of care.
- Guilty for not being there.
- Relieved when father is safe.
- Frustrated by poor service.

Empathy Map showing the patient's thoughts, feelings, actions, challenges, and expectations regarding heart disease.
