

Project Design Phase

Date	27 June 2026
Team ID	SWTID-2026-6335
Project Name	Heart Data Analysis
Maximum Marks	2 Marks

Proposed Solution Template:

The Below given table describes the proposed solution in detailed way:

Refer the below pages for the table

S.No.	Parameter	Description
1.	Problem Statement	Heart disease is one of the leading causes of death worldwide. Analyzing patient data using traditional methods is time-consuming and makes it difficult to identify important

		risk factors and trends. There is a need for an interactive visualization system that simplifies data analysis and supports informed decision-making.
2.	Solution description	Develop an interactive Heart Disease Analysis Dashboard using Tableau to visualize patient information, disease distribution, and key risk factors such as age, cholesterol, blood pressure, chest pain type, and exercise-induced angina. The dashboard provides filters, KPIs, and charts for easy exploration of the data.
3.	Novelty	The solution transforms raw healthcare data into interactive visual dashboards, enabling users to identify trends and patterns quickly. It offers dynamic filtering and KPI tracking, making data analysis more intuitive than traditional reports.
4.	Social Impact	The dashboard helps healthcare professionals, researchers, and students better understand heart disease trends and risk factors. It supports awareness, improves data interpretation, and assists in making evidence-based decisions.
5.	Business Model (Revenue Model)	The dashboard can be provided to hospitals, healthcare organizations, and research institutions as a data analytics solution.

		Revenue can be generated through licensing, dashboard customization, consulting, training, and maintenance services.
6.	Scalability of the Solution	The dashboard can be expanded by integrating larger datasets, additional healthcare indicators, and other disease datasets such as diabetes or kidney disease. It can also be enhanced with predictive analytics and connected to live healthcare databases in the future.
