

Project Design Phase
Solution Architecture

Date	27 June 2026
Team ID	SWTID-2026-6335
Project Name	Heart Data Analysis
Maximum Marks	4 Marks

Solution Architecture Diagram:

Data Collection and Preparation: Heart disease data is collected from a CSV/Kaggle dataset, cleaned, and preprocessed using Excel or Tableau Prep to ensure accurate and consistent analysis.

Data Visualization and Analysis: The processed data is connected to Tableau, where KPIs, charts, filters, and dashboards are created to analyze heart disease trends, risk factors, demographic patterns, and patient characteristics.

Insight Delivery: The interactive Tableau dashboard provides meaningful insights to doctors, researchers, students, and healthcare analysts, enabling informed decision-making, data exploration, and easy sharing of analytical reports.
